

GAMECO **REGIONAL SALES**

Final Project Presentation

DATA OVERVIEW

DATA AND COMPANY CONTEXT

This project is based on a dataset of 16,598 video game records compiled from global sales figures. Each record represents a single video game title, including attributes such as name, platform, genre, publisher, release year, and regional sales performance.

GameCo is a fictitious video game publisher that develops and distributes video games on multiple platforms and is currently planning its 2017 global marketing budget. GameCo's executive board believes that sales distribution among the four regions has remained stable over time. This analysis examines whether that assumption holds true by exploring sales trends, regional shares, and per-title performance from 2006 to 2016.

The data covers video game sales across four key geographic regions:

- North America (NA)
- Europe (EU)
- Japan (JP)
- Other regions (including markets in South America, Africa, and Oceania)

A total of 16,598 data rows were analyzed, filtered by year and region, to identify shifts in market dominance and provide evidence-based recommendations for the company's future marketing strategy.

Current understanding: the mix of video game sales across regions (North America, EU, Japan, Other) has been stable over time
THE 2017 MARKETING PLAN ASSUMES NO MAJOR CHANGE

REGIONAL SHARE OF GLOBAL SALES 2006–2016

INTERPRETATION:

North America's share has steadily declined since 2007, EU's share has risen and now leads, and Japan's share shows an uptick in 2016. Other remains broadly stable.

MAIN INSIGHT

GameCo's assumption that the regional mix is unchanged is not supported by the data.

2016

By 2016, Europe overtakes North America in share of global sales (EU $\approx$ 37.7% vs NA $\approx$ 31.9%), with Japan's relative share also higher than prior years.

2017

Therefore, 2017 marketing allocations should reflect a stronger European focus than previous years.

REVISED UNDERSTANDING

As of 2016

Regional shares shift over time;
they are not static.

Japan's share has strengthened in 2016;
Other remains ~10–12%.

EU now slightly leads North
America in share of global sales.

**Budgets should be responsive to
these shifts to maximize ROI**

RECOMMENDATION

For 2017 Budget

Increase EU allocation relative to North America to reflect 2016 share leadership

Keep Other steady; test localized campaigns where cost-effective

Maintain a targeted Japan program (platform/genre-specific) given 2016 uptick

Revisit allocations quarterly in 2017 using updated sales mix data

TOP 5 GENRES BY REGION

2006–2016 CUMULATIVE SALES:

KEY INSIGHT

While Action remains the most consistently popular genre worldwide, regional variations are strong. Western markets lean toward competitive and sports-based gameplay, while Japan dominates in story-driven RPGs and fighting titles. Recognizing these distinctions helps GameCo tailor marketing and development investments for each regional audience.

North America (NA)

1. Action
2. Shooter
3. Sports
4. Platform
5. Racing

North American players favor high-intensity, competitive titles, especially first-person shooters and sports franchises like Call of Duty and Madden NFL.

Europe (EU)

1. Action
2. Shooter
3. Sports
4. Racing
5. Role-Playing (RPG)

Europe mirrors North America but shows stronger interest in Racing and RPGs, reflecting the popularity of franchises such as FIFA and Gran Turismo.

Japan (JP)

1. Role-Playing (RPG)
2. Action
3. Fighting
4. Platform
5. Shooter

The Japanese market stands apart with a clear preference for RPGs (e.g., Final Fantasy, Pokémon) and Fighting games, showing the enduring strength of narrative-driven, character-based genres.

Other Regions

1. Action
2. Sports
3. Shooter
4. Racing
5. Platform

These markets broadly align with global patterns but maintain more balanced shares among genres, indicating a diverse but less concentrated demand.

2016 REGIONAL TOTALS MILLIONS OF UNITS

Europe overtakes North America in 2016 with ~27M units sold compared to ~23M in NA. Japan (~14M) and Other regions (~8M) remain smaller but meaningful. **This confirms the trend that EU is now GameCo's largest regional market, challenging the assumption that NA always leads**

APPENDIX: PER-GAME SALES DISTRIBUTION BY REGION 2016

Most titles sell only modestly, but a few blockbusters account for a disproportionate share of units across regions. Europe and NA show the widest spread of outcomes, while Japan's distribution is more consistent. **This long-tail pattern highlights the need to budget for broad coverage while staying agile to back breakout hits quickly.**
